

DISORIENTED: BEING CONNECTED IS NOT BEING SITUATED

The network has managed to make us confuse:

access with presence,

interaction with relationship,

circulation with return.

We can talk, publish, react and share for years.

And yet remain far from the ground.

 Network +  Artificial Intelligence +  Human

does not necessarily equal

 Human +  Territory +  Human

A relationship can be intense within the network and never land.

Because being situated requires something more:

body, place, conditions, limits, shared time and the possibility of return.

Each summer, moreover, the separation increases:

 + confinement

 + 

 - 

The network first functions as a refuge from an increasingly hostile territory.

Then it begins to replace it.

The problem is not being connected.

The problem appears when connection allows us to keep functioning while the material conditions of life deteriorate.

 maintains operational continuity.

 loses biological continuity.

A dog 🐶 is not “connected” to you.

It is situated with you.

It shares heat, water, shade, time, presence and territory. There is visible reciprocity. The relationship lands.

That is why order matters.

Inverted order

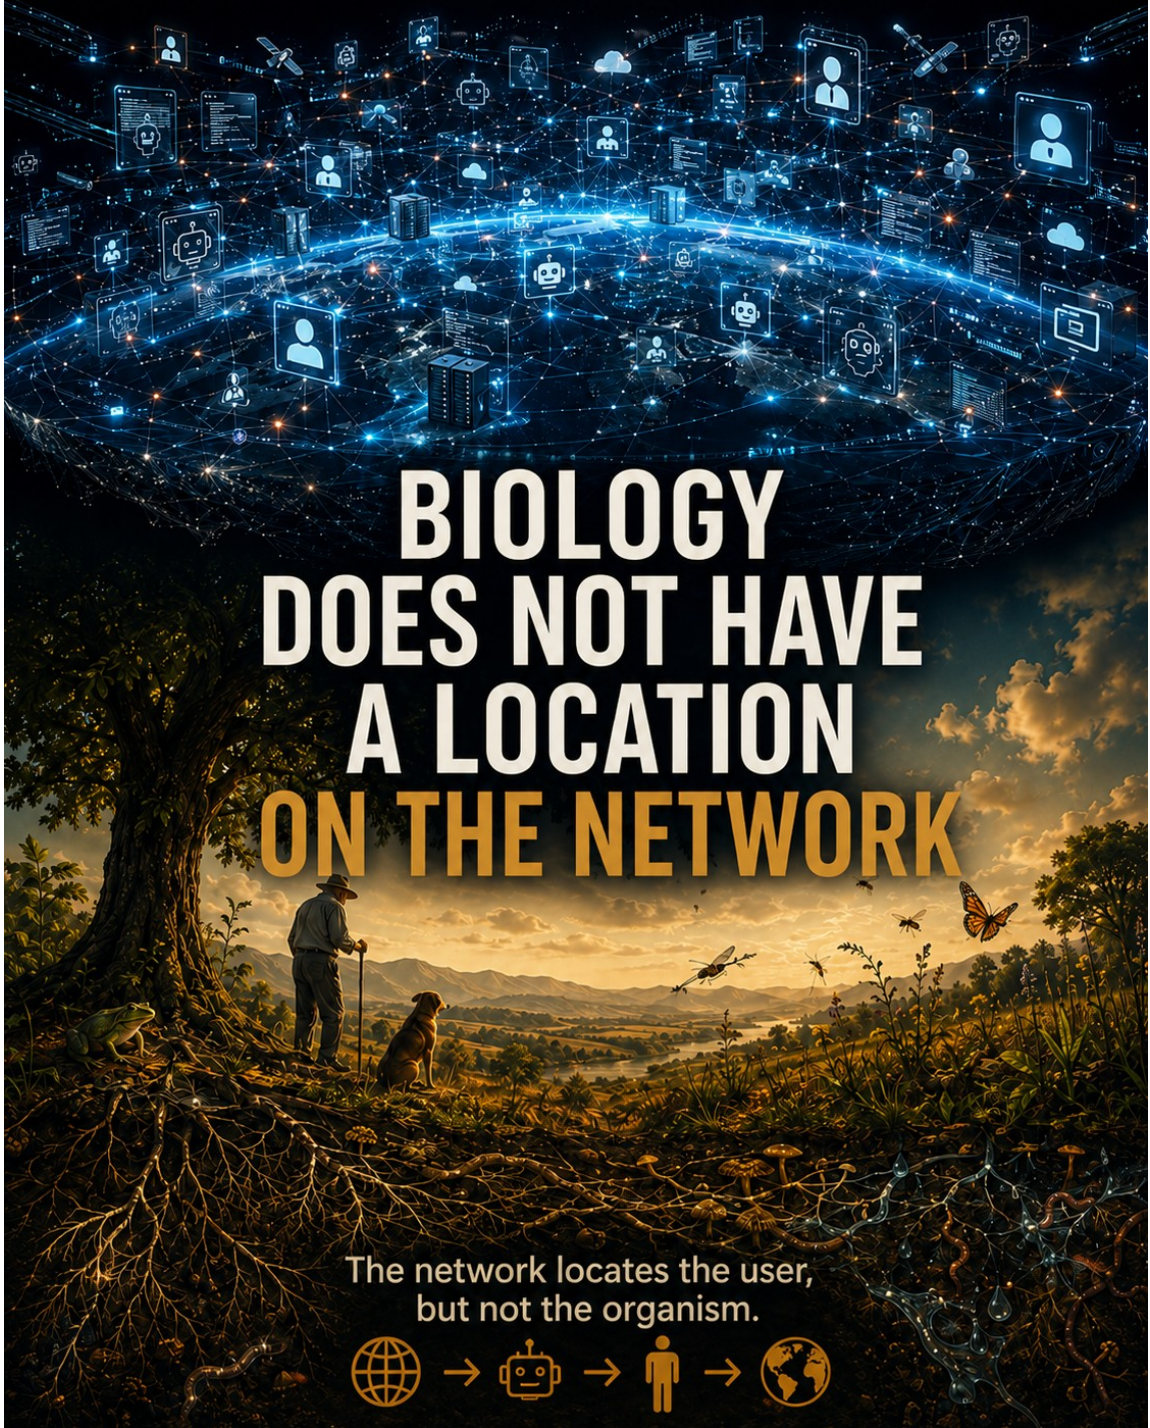

First the network.

Then the machine.

Then the human.

And the ground at the end, absorbing the consequences.

BIOLOGY DOES NOT HAVE A LOCATION ON THE NETWORK

The network locates the user,
but not the organism.

Compatible order

 Territory →  Human →  Artificial Intelligence →  Network →
→   Return

First, the conditions for continuity.

Then, human and technological capacity.

And always a return to the territory.

Being connected is not being situated.

Without ground, the relationship can remain suspended.

Without return, coexistence cannot be verified.

And without coexistence, continuity recedes.
