

THE TORTILLA WITHOUT A CENTER

The left, the right, and the center argue.

The tortilla keeps burning.

LEFT
turns to the left

CENTER
tries to stay
in the middle

RIGHT
turns to the right

REALITY

fire doesn't understand
ideologies

**BEFORE DECIDING WHICH SIDE TO TURN TO,
WE MUST PREVENT WHAT IS BURNING.**

THE WRONG AXIS

Left, right, and center are political positions.

Fire is not.

If a tortilla is burning, the first question is not which side it should be turned to, but how to prevent it from burning. Only afterward does it make sense to discuss what to do with it.

At planetary scale, something similar happens. Temperature, water, soil, biodiversity, energy, and human pressure do not occupy an ideological position. They are material conditions.

Politics comes afterward: in how to respond, how to distribute costs, what to transform, what to preserve, and which priorities to assume.

The problem begins when position takes the place of reference and each side tries to fit reality inside its own axis.

Then the left looks left, the right looks right, and the center tries to maintain balance while what sustains the discussion continues to deteriorate.

The planet is not on the left, on the right, or in the center. It is underneath.

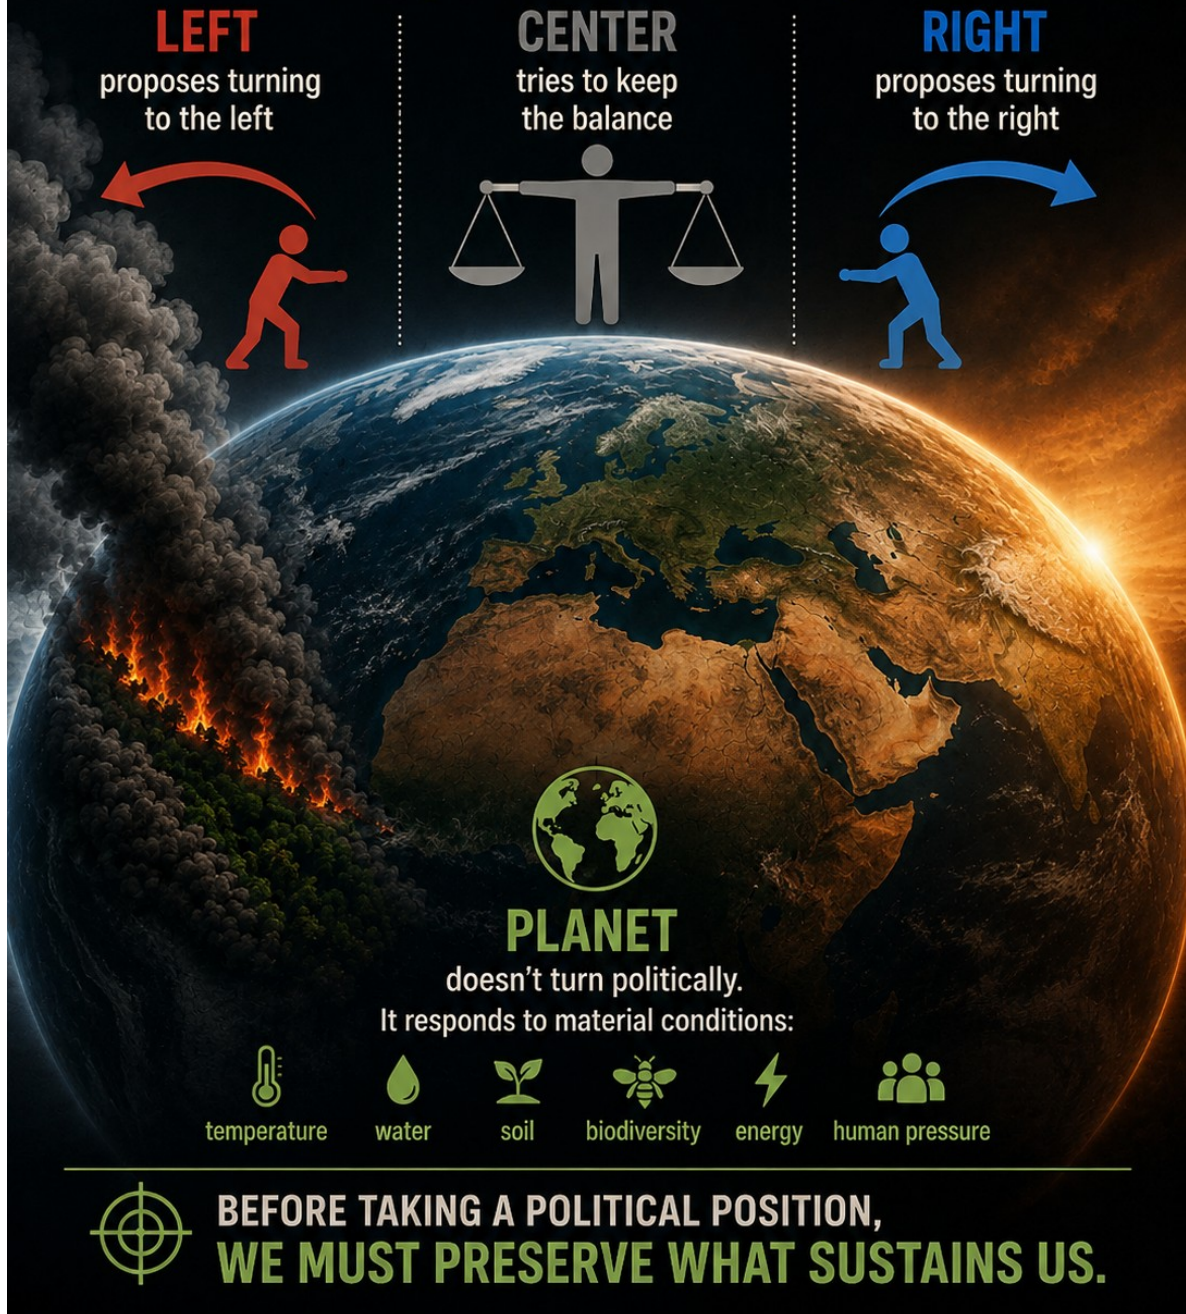

It is not one more position.

It is the common base.

THE PLANET IS NOT IN THE CENTER

The left, the right, and the center argue.

The planet keeps warming.

Orientation precedes position.
