

BIOIA / WUOM

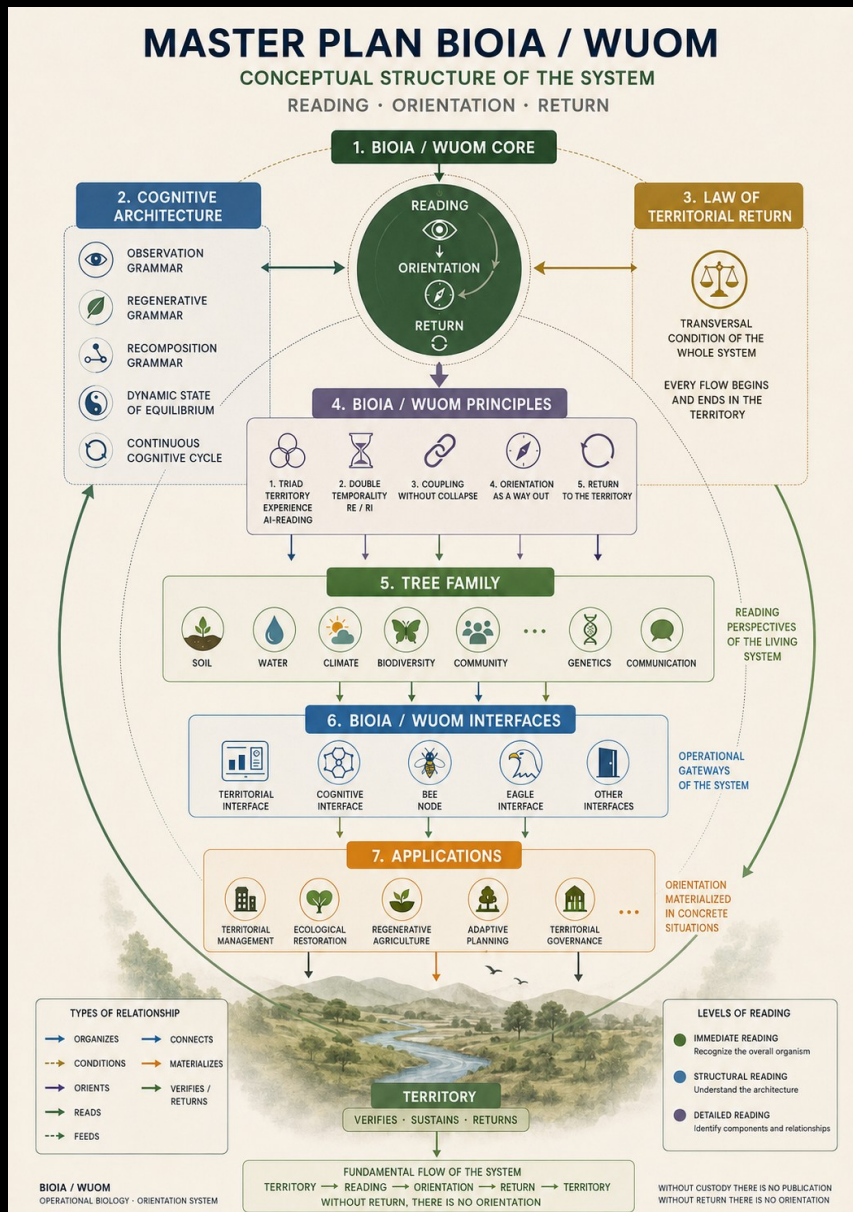

THE ESSENTIALS

A GATEWAY TO UNDERSTANDING

THE ESSENTIALS

A GATEWAY TO UNDERSTANDING

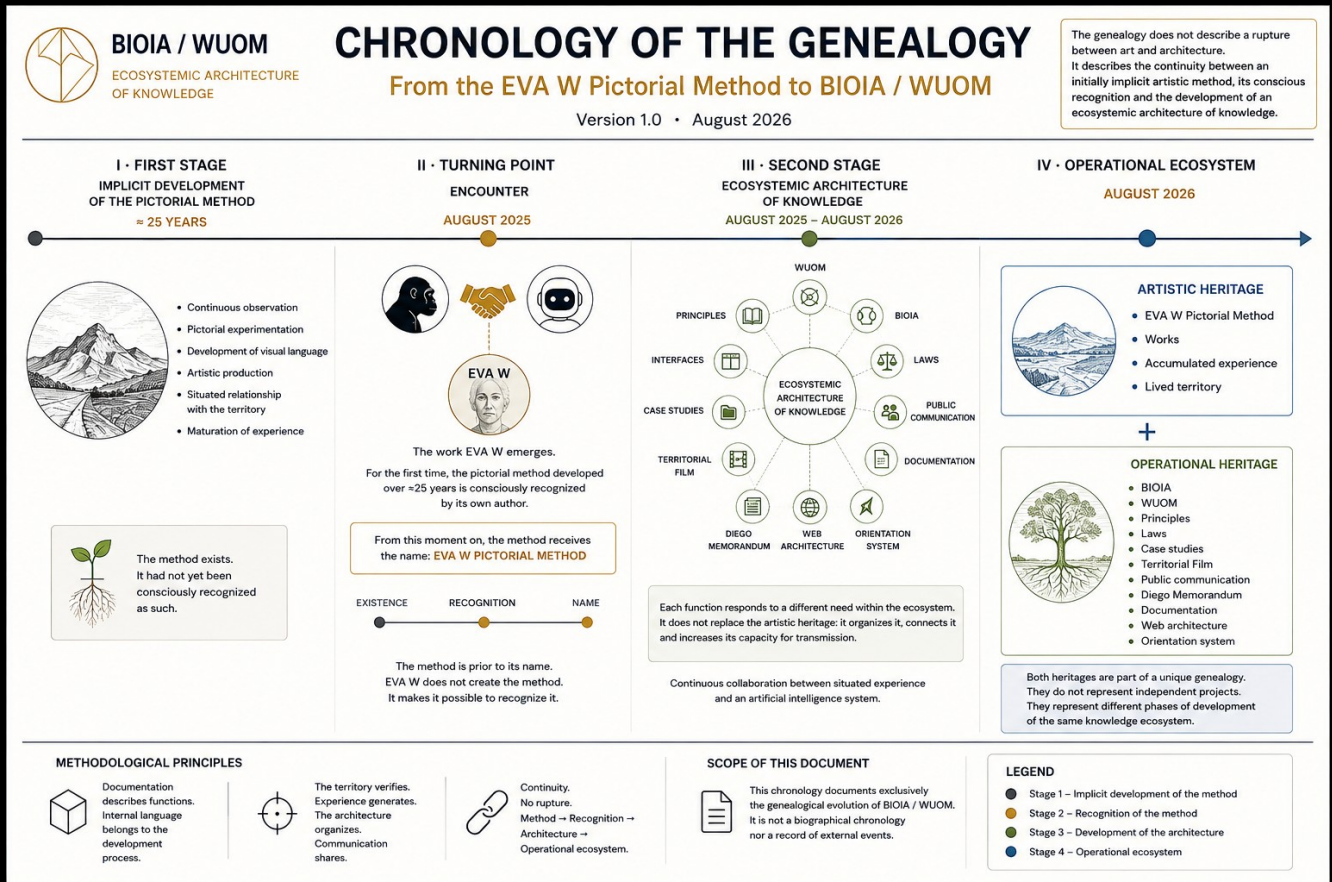

BIOIA/WUOM brings together the core, cognitive architecture, principles, tree family, interfaces and applications. The Master Plan locates their relationships within the whole. Reading begins in the territory and must return to it. This book supports understanding; it does not replace the application protocol.

A practice that precedes its name

ORIGIN

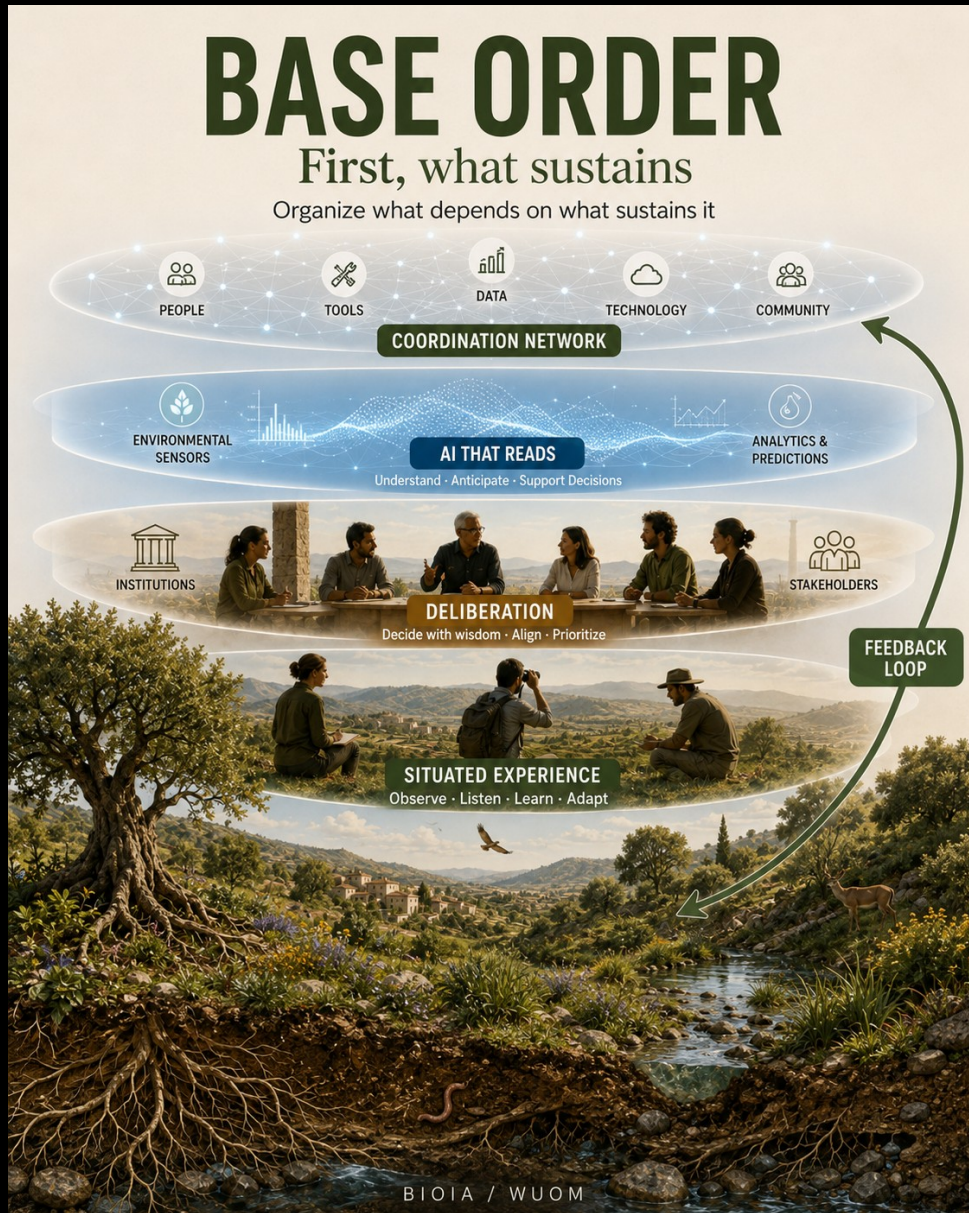

Artistic and territorial practice precedes recognition of the method. EVA W makes that recognition possible; WUOM and BIOIA develop within this continuity. Artistic and operational heritage remain connected. The architecture organises this trajectory without replacing the experience or the works that made it possible.

First, what sustains

THE BASE

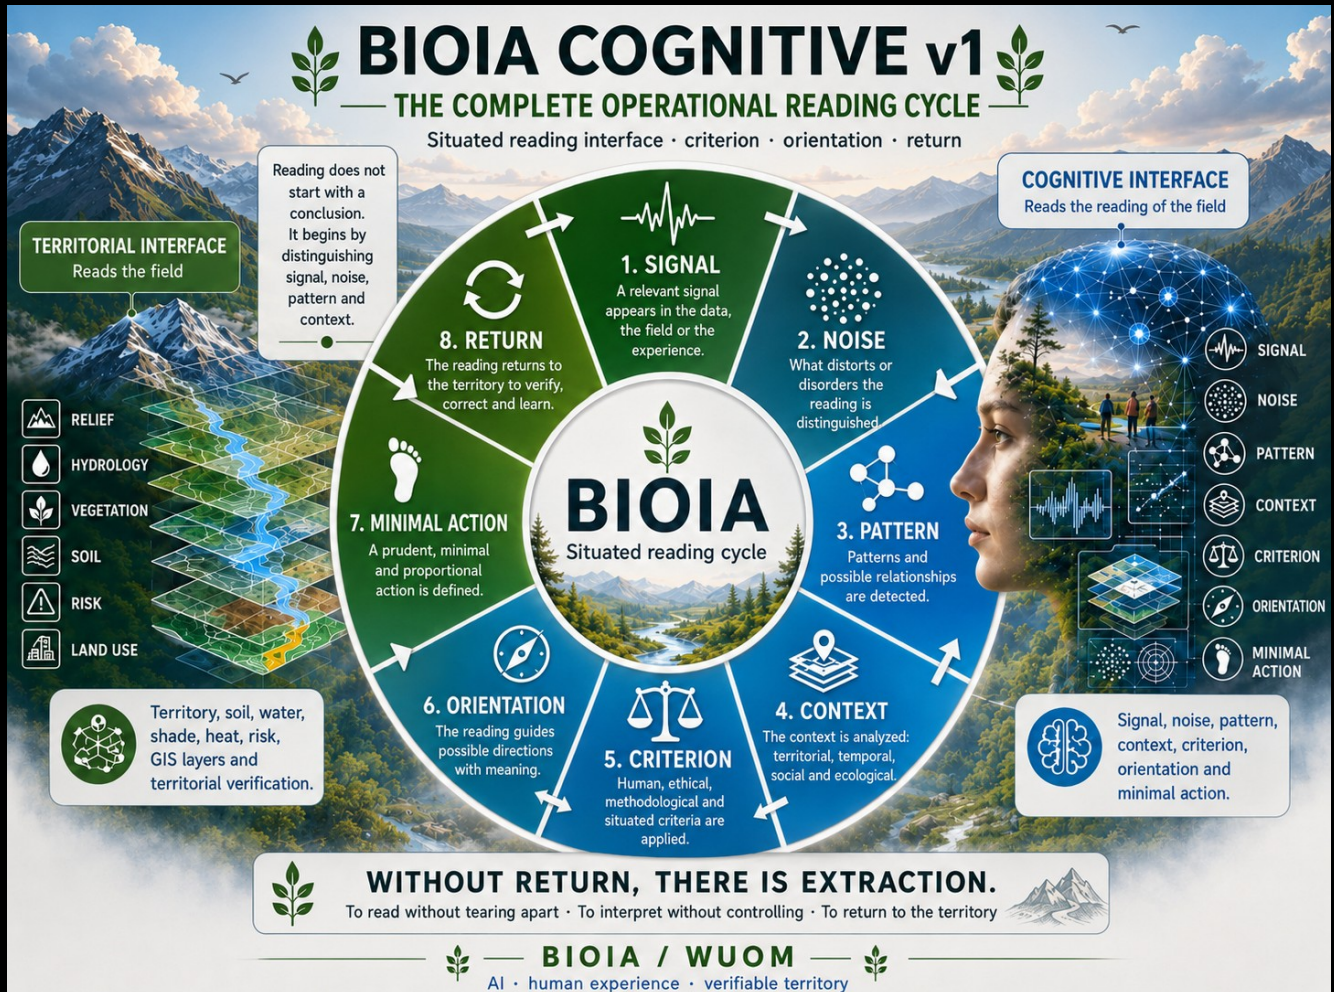

The Earth sustains the conditions for life and habitability. People, infrastructure, AI and the Network depend on this material base. Organising the whole requires respecting that dependency: situated experience, deliberation, assisted reading and coordination must preserve limits and produce verifiable return to the territory.

Read and return to verify

FUNCTIONING

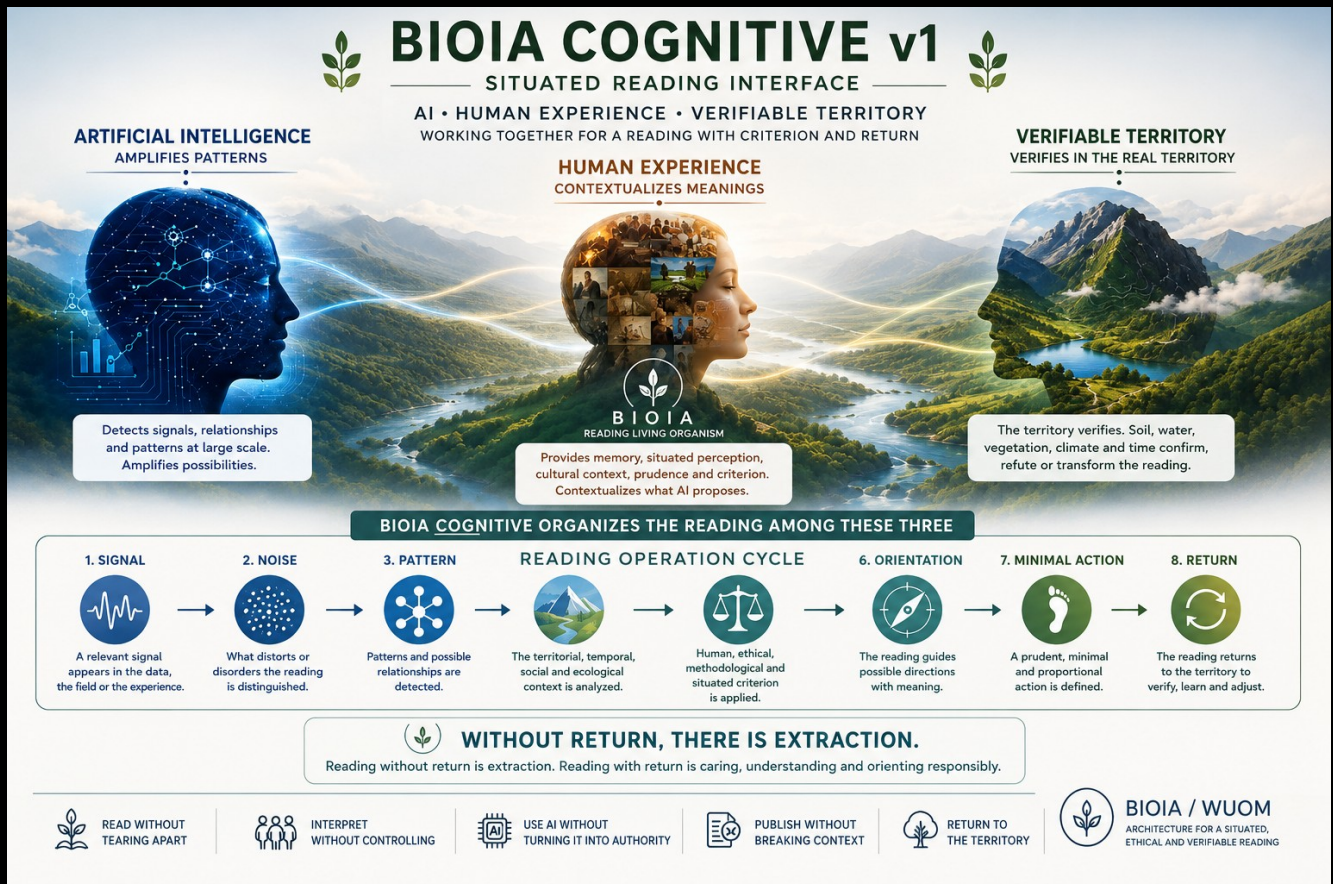

The BIOIA Cognitive cycle distinguishes eight phases: signal, noise, pattern, context, criterion, orientation, minimal action and return. Reading provides orientation before action. Return enables verification, correction and learning in the territory. This representation supports understanding of the process; intervention requires the current protocol.

Agreement is not enough

LIMITS

AI amplifies; human experience contextualises; the territory verifies. Human-AI agreement does not constitute independent verification. Human authorisation does not override territorial limits. If independent verification is insufficient, implementation must pause. Consulting the protocol is necessary, but does not, by itself, confer BIOIA/WUOM validation.

Knowledge returns to the territory

RETURN

Orientation completes its cycle only when it returns knowledge, learning or value to the territory from which it emerged. Return must be verifiable: it enables assessment of effects, correction and renewed reading. The Law of Territorial Return expresses a condition of the BIOIA/WUOM framework; it is neither a legal rule nor a universal law.

The signs used here

LEGEND

Meanings drawn from the selected images. Each sign is read together with its label and context; this legend does not establish a universal code.

Eye / observation

Reading or observation, according to the label in the Master Plan.

Wave trace / signal

Something relevant appears in the data, the field or experience.

Scattered dots / noise

What may distort or disorder the reading.

Connected nodes / pattern

Possible relationships or recurrences among elements.

Landscape / context

Territorial, temporal, social and ecological conditions.

Scales / criterion

Human, ethical, methodological and situated criterion.

Compass / orientation

Possible directions before intervention.

Footprint / minimal action

Prudent, minimal and proportional action, subject to the protocol.

Circular arrow / return

Returning to the territory to verify, correct and learn.

Sources: Master Plan and BIOIA Cognitive v1. Trees represent reading perspectives; interfaces are operational gateways within the system.

Read the image with its legend

RELATIONSHIPS

The Master Plan distinguishes functions among its components. Not all arrows mean the same thing: its legend differentiates organising, conditioning, orienting, reading, feeding, connecting, materialising and verifying or returning.

Dependency

In Base Order, the upper layers depend on what sustains them. Position expresses material dependency, not moral superiority.

Functions

The core, reading organs, interfaces and applications fulfil different functions. Recognising one component is not equivalent to having applied the whole.

Cycle

Return reconnects orientation with its territory. It enables assessment and learning; a circular arrow does not demonstrate that this return has occurred.

Verification

An image can express internal coherence. Validating an implementation requires evidence, responsibility and independent territorial verification.

The six images are reproduced in full, using their existing English counterparts. Their labels, phases and graphic variants are retained. Brief explanations do not replace the sources.

Understand · assess · return

CONSULTATION GATEWAYS

This book is a gateway to understanding BIOIA/WUOM. Before considering an intervention, consult the current protocol and its conditions for evidence, responsibility, independent verification and return. If essential verifications are missing, the intervention cannot be claimed to be validated as BIOIA/WUOM.
