

STRUCTURAL HYPOTHESIS v1.1

$$0 + 1 + 2 = 3 \rightarrow 0'$$

Emergence · Asymmetric dependence · Return

- **0** can persist physically without **1 · 2 · 3** •
- 1 · 2 · 3** cannot be sustained without **0**.

BIOIA / WUOM

OBSERVED PATTERN

retrospective recurrence · two internal correspondences

*The pattern was not imposed as a prior template.
It only became visible after the development.*

1 ARCHITECTURES

three differentiated architectures · one integrating position

2 DOCUMENTARY DEVELOPMENT

It does not prove a law. It indicates an observed internal correspondence.

Observed pattern · open hypothesis · internal correspondence

THE OBSERVED PATTERN

EMERGENCE • ASYMMETRIC DEPENDENCE • RETURN

When reviewed together, EVA W, WUOM and BIOIA — and their documentary development — a common pattern has emerged.

It was not designed in advance. It appeared retrospectively at different levels.

The hypothesis proposes that this correspondence can describe a structural relationship.

Its general validity remains open for verification in each case.

PROPOSED STRUCTURAL NOTATION

ASYMMETRY

0 can persist physically without $1 \cdot 2 \cdot 3$.

$1 \cdot 2 \cdot 3$ cannot be sustained without **0**.

OBSERVED RECURRENCE

LEVEL 1 • STRUCTURES

LEVEL 2 • DOCUMENTARY DEVELOPMENT

WHAT HAS BEEN OBSERVED

At two different levels, the same minimum structure appears: three positions that, when interacting, generate a fourth position of integration that must return to be compared with the base.

$$0 + 1 + 2 = 3 \rightarrow 0$$

BIOIA / WUOM

FUNDAMENTAL ASYMMETRY

DEPENDENCE · CONTINUITY · CONDITIONS FOR HABITABILITY

The territory is not just another element of the system. It is the material condition that makes the existence, functioning and habitability of the others possible.

The relationship is not symmetric. There is a dependence of origin and a dependence of functioning that must be verified in each case.

This asymmetry is the basis of the hypothesis and of the return to 0 to verify continuity and conditions for habitability.

CONCEPTUAL SEQUENCE OF EMERGENCE AND RETURN

3 does not close the system. **3** must return to **0** to verify material continuity and its conditions for habitability.

PROPOSED DEPENDENCE · TO BE VERIFIED IN EACH CASE

	 0 TERRITORY	 1 HUMAN	 2 TECHNICAL APPARATUS	 3 NETWORK
CAN PERSIST WITHOUT...	✓ does not need 1 · 2 · 3	✗ cannot be sustained without 0 (may reduce its viability)	✗ cannot be sustained without 0 + 1 (may reduce its viability)	✗ cannot be sustained without 0 + 1 + 2 (may reduce its viability)
DEPENDS ON...	— does not depend on 1 · 2 · 3 (to exist)	0 (depends on the territory)	0 + 1 (depends on the territory and the agency)	0 + 1 + 2 (depends on the territory, the agency and the technical)

 **0** can persist without 1 · 2 · 3.
1 · 2 · 3 cannot be sustained without 0.

FUNCTIONAL DEPENDENCE SYSTEM

The four form a coupled system. An action on one component can modify the conditions of the others.

Analytically distinct, but functionally inseparable.

INTENT / INTERVENTION

0 SUSTAINS THE WHOLE

The territory sustains the whole.

0 CAN PERSIST

If the coupling breaks down destructively, some human and technical functions may be lost, although **0** persists under other conditions.

THE RETURN THAT VERIFIES THE CIRCUIT

VERIFICATION · CONTINUITY · RESPONSIBILITY

Position 3 is not the final one. Every emergence must return to 0 to verify what remains in the material base after the produced effects.

The return does not seek to preserve the initial state, but to verify whether the base is still capable of sustaining the whole and under what conditions.

Without a return to 0, the material continuity cannot be verified; impacts, degradation or extraction may persist without sufficient contrast.

CIRCUIT OF EMERGENCE AND RETURN

PROVISIONAL CONCEPTUAL FORMULA

$$0 + 1 + 2 = 3 \downarrow 0$$

Emergence and return: the same sequence of reading.

It does not constitute a general law by itself.

THREE POSSIBLE RESULTS

1. VIABLE COUPLING

→ CONTINUITY OF THE SYSTEM

2. FRAGILE COUPLING

→ CONTINUITY AT RISK

3. DECOUPLING

→ COLLAPSE OF THAT CONFIGURATION

PROPOSED RELATIONS $0 + 1 + 2 = 3 \rightarrow 0$

I · MATERIAL PRIMACY

0 precedes and sustains 1 · 2 · 3 materially.
Without 0, there is no support for the whole.

II · EMERGENCE

3 emerges from the relationship between 0, 1 and 2.
It is not a fourth element simply added.

III · ASYMMETRY

0 can persist physically without 1 · 2 · 3.
1 · 2 · 3 cannot be sustained without 0.

IV · VERIFICATION RETURN

Every emerging configuration must return to 0 to contrast its material continuity.

OPERATIONAL
ORIENTATION

The task of 1 and 2 is not to "save" 0,
but to order the relationship of the whole so that the return to 0 remains possible and verifiable.

OPEN HYPOTHESIS · OBSERVED PATTERN

It is not a closed law. It is a structural hypothesis under revision.
It must be contrasted in practice, in the territory and over time.

WHAT 1 AND 2 ATTEMPT AND WHAT IS AT STAKE

INTENT · CAPACITY FOR INTERVENTION · COLLECTIVE RESULT

Deliberate intervention is attributed here to human actors who use technical capacities.

But the result **does not** depend only on us.

It is not about saving 0.
It is about verifying whether the base that sustains us can still sustain us.

CAPACITY FOR INTERVENTION

WHAT 1 AND 2 ATTEMPT

1 + 2

Capacity to intervene and reorder the relationship.

Intent $\neq$ Result

THE WHOLE AND ITS COUPLING

IF THE COUPLING LOSES VIABILITY

WHO DEPENDS ON WHOM?

WHAT CAN EACH ONE DO?

WHAT DEFINES CONTINUITY?

OPERATIONAL
ORIENTATION

The task of 1 and 2 is not to "save" 0,
but to order the relationship of the whole so that **it can continue to sustain us.**

OPEN HYPOTHESIS · OBSERVED PATTERN

It is not a closed law. It is a structural hypothesis under revision.
It must be contrasted in practice, in the territory and over time.

FROM PATTERN TO PRACTICE

OPERATIONAL ORIENTATION · OBSERVATION · VERIFICATION · REFLEXIVE ACTION

The structural hypothesis is not a closed scheme to explain the world, but an operational orientation to act within it.

Its function reminds us of a contrasting principle: **every action must return to 0 to verify its effect on the material base.**

It is a continuous cycle of observation, decision, action and return.

KEY QUESTIONS IN EACH RETURN TO 0

- | | | | |
|---|--|--|--|
| <p>1</p> <p>CAN THE BASE STILL BE SUSTAINED?
Does the territory maintain its capacity to sustain the whole?</p> | <p>2</p> <p>HOW HAVE WE AFFECTED THE RELATIONSHIP?
What have we altered among 1, 2 and 3, and how has 0 responded?</p> | <p>3</p> <p>WHAT HAS BEEN GAINED AND WHAT HAS BEEN LOST?
All actions have visible and invisible effects.</p> | <p>4</p> <p>WHAT ORIENTATION CORRECTS OR CONFIRMS?
Decide whether to continue, adjust or halt.</p> |
|---|--|--|--|

ORIENTATION GUIDE

OPERATIONAL REMINDER

- Without sufficient verification, it cannot be determined whether the action preserves its viability.
- What is not evaluated may remain outside subsequent decisions.
- The orientation does not seek acceleration, but to sustain the possibility of continuing.

$0 + 1 + 2 = 3 \rightarrow 0$
It is not a straight line.
It is a cycle of responsibility.

OPERATIONAL ATTENTION

Do not lose the capacity for return.
Do not lose the reading of the territory.
Do not lose awareness of dependence.
Do not lose the responsibility of 1 and 2.

If we take care of the return, the system can be sustained.
If we forget it, degradation can progress.

Observe. Decide. Act. Emerge. Return.

This cycle proposes a way of learning and correcting without losing the base that sustains us.

SYNTHESIS AND PROVISIONAL CLOSURE

OBSERVED · UNDERSTOOD · ORDERED · CONTRASTED · SHARED

We have observed a pattern that appears in structures and in different developments.

We have formulated a hypothesis to reorient our actions without reducing it to a closed scheme.

We put it to the test in practice, in the territory and over time.

It is not a definitive truth.

It is an operational orientation to act without losing the return.

THE NOTATION THAT SUMMARIZES IT

The fourth position emerges from the relationship between the first three. It is not an additional element: it is an emerging configuration that must return to 0 to verify that the material base can still sustain the whole.

PROPOSED RELATIONS

I · MATERIAL PRIMACY

0 precedes and sustains 1 · 2 · 3 materially.

Without 0, the rest has no support.

II · RELATIONAL EMERGENCE

3 emerges from the relationship between 0, 1 and 2.

It is not a fourth element simply added.

III · STRUCTURAL ASYMMETRY

0 can persist physically without 1 · 2 · 3.

1 · 2 · 3 cannot be sustained without 0.

IV · VERIFICATION RETURN

Every emerging configuration must return to 0 to verify its material continuity.

OPERATIONAL CORE

Every emerging configuration must return to the material conditions that sustain it; without contrast, continuity cannot be established.

$$0 + 1 + 2 = 3 \rightarrow 0$$

WHAT WE AIM FOR, WHAT MUST BE SUSTAINED, WHAT CAN PERSIST

WHAT 1 AND 2 ATTEMPT

Capacity to intervene and reorder the relationship.

Intention ≠ Result

0 SUSTAINS THE WHOLE

A whole that can be sustained only if the coupling remains viable.

Continuity is collective.

0 CAN PERSIST

If the coupling fails, the territory can persist under other conditions, while some human and technical functions lose viability.

OPERATIONAL COMMITMENTS

OBSERVE

Read the territory before acting. Recognize the material base.

DECIDE

Define clear intentions and compatible priorities.

ACT

Mobilize tools, knowledge and infrastructure with responsibility and appropriate scale.

EMERGE

Accept that the relationship has its own dynamics. Not everything is controllable.

RETURN

Always return to 0 to verify impacts, continuity and changes. Adjust or halt.

OBSERVED PATTERN · OPEN HYPOTHESIS

It is not a closed law. It is a structural hypothesis under revision. It must be contrasted in practice, in the territory and over time.

Orientation precedes action.

$$0 + 1 + 2 = 3 \rightarrow 0$$

Without return, continuity cannot be verified.

CONCEPTUAL LEGEND AND CORRESPONDENCE BETWEEN MODELS

DEFINITIONS · OPERATORS · SCOPE · RELATION TO ELEMENTAL DISORDER

1 ELEMENTS AND CONCEPTUAL POSITIONS

PROVISIONAL CONCEPTUAL NOTATION

$$0 + 1 + 2 = 3 \rightarrow 0'$$

Represents a conceptual sequence of intervention, emergence and return.

It is neither a law, nor a formal equation, nor a necessary chronological sequence.

2 OPERATORS AND THEIR MEANING

RELATION / CONCURRENCE

Indicates that the elements act jointly or are related.

It is not an arithmetic sum.

CONCEPTUAL SYNTHESIS / EMERGENCE

Indicates that 3 can arise from the relationship between 0, 1 and 2.

It is not a mathematical equality.

TRANSITION / RETURN / SEQUENCE

Indicates the passage to the subsequent state of the base (0') after observing and evaluating the result.

It is not a necessary causality.

3 SCOPE AND LIMITATIONS

The numbers identify conceptual positions within each scheme.

Their correspondence across levels is interpretative and analytical.

It does not imply identity between the elements.

It does not imply causal equivalence.

It does not imply chronological equivalence.

It is not a mathematical operation.

4 TWO COMPLEMENTARY MODELS

ELEMENTAL DISORDER HYPOTHESIS

Order of appearance of differentiated elements in the system's history.

STRUCTURAL HYPOTHESIS

Conceptual sequence of intervention, emergence and return.

RELATIONSHIP BETWEEN MODELS

The two cartographies do not represent the same genealogy.

In the Structural Hypothesis, AI is analytically included within the technical apparatus (2), while in the Elemental Disorder Hypothesis AI is distinguished as a distinct element following a pre-existing network.

Their correspondence is analytical and interpretative, not a chronological or causal equivalence.

5 TYPES OF RETURN

VERIFICATION RETURN

Observe and evaluate the resulting state of the base and the consequences of the operation.

Provides information about what has occurred.

OPERATIONAL RETURN

Incorporate that evaluation into subsequent decisions: continue · adjust · correct · stop.

Guides future action, but does not guarantee recovery.

CONTRAST ≠ CORRECTION ≠ RECOVERY

- Evaluating does not imply correcting.
- Correcting does not guarantee recovery.
- The time available to correct certain impacts may be limited.

6 HOW TO CONTRAST A CASE

1 Define the territory or observed system.

2 Establish the period.

3 Identify the sustaining function or capacity.

4 Specify the intervention (1 and 2).

5 Measure the state of the base (0').

6 Carry out the verification return.

7 Make subsequent decisions.

8 Define which observation would force revision of the proposed relationship.

BIOIA OPERATIONAL ORIENTATION

This legend allows the hypothesis to be used as a framework for analysis and action guidance, while preserving its limits and conditions of contrast.

STRUCTURAL HYPOTHESIS v1.1 · BIOIA / WUOM
Conceptual framework under revision. It is not a closed law.
It must be contrasted in practice, in the territory and over time.

STRUCTURAL HYPOTHESIS

$$0 + 1 + 2 = 3 \rightarrow 0$$

emergence • asymmetric dependence • verification return

Observed pattern • open hypothesis • not an established law.

Orientation precedes action.
Without return, continuity cannot be verified.

EVA W • WUOM • BIOIA

STRUCTURAL HYPOTHESIS v1.1
