

MEMORANDUM DIEGO

17 July — 17 August 2026

WHERE WE COME FROM

In 2015, an international agreement on climate change was reached.

In 2026, eleven years later, the thermal signal allows us to observe the material conditions we are facing.

On 17 July 2026, a new European proposal was presented concerning the pace and instruments of the climate response.

This Memorandum presents a situated observation carried out up to 17 August 2026.

WHAT THE THERMAL SIGNAL SHOWED

During the observed period, impacts, operational limits and costs related to temperature were documented across practically all the sectors and territorial functions observed.

health · production · water · biodiversity · fires · work · transport · energy · infrastructure · services · economic activity

Banking was the only exception in which no direct operational thermal impact was documented.

TERRITORIAL COSTS ASSOCIATED WITH TEMPERATURE ARE DOCUMENTED.

SOME ARE REFLECTED IN ECONOMIC TERMS.

OTHERS REMAIN OUTSIDE ACCOUNTING.

Biodiversity loss, ecological degradation and other territorial damage are not necessarily reflected in the available economic estimates.

WHAT THE LIMIT SHOWED

During the observed period, having more resources did not mean having unlimited capacity.

On 17 August, the authority responsible for an emergency acknowledged that there were periods when the fire was **beyond firefighting capacity**.

When that capacity was exceeded, priority shifted to protecting the population and strategic points.

THE LIMIT CEASED TO BE AN INFERENCE.

IT BECAME AN ACKNOWLEDGED FACT.

ADMINISTRATIVE CLOSURE ≠ MATERIAL RECOVERY

HUMAN RETURN ≠ TERRITORIAL RETURN

MANAGING PRESSURE ≠ HAVING GREATER CAPACITY

INSTITUTIONAL TIME CAN BE EXTENDED.

TERRITORIAL TIME DOES NOT STOP.

CLOSURE

17 JULY

Proposal.

17 JULY — 17 AUGUST

Situated observation.

17 AUGUST

Documentary closure.

The thermal signal showed cross-sector impacts, capacity limits and material costs.

**THIS IS WHAT THIS SITUATED OBSERVATION
DOCUMENTED.**
